# RENOVAGE™

**Geranylgeranone**

**Function:**

Comprehensive anti-ageing.

**Definition:**

Geranylgeranone (GGA)  
in a lipophilic solvent.

**Properties:**

Fights against all signs of ageing:  
functional: dehydration, age spots,  
ineffective barrier function.

structural: ptosis, wrinkles, pores,  
erythrosis.

**Characteristics:**

Anti-ageing and protective effect  
against stress, by telomere  
stabilization and DNA maintenance  
(cell division).

Improvement of tissue quality by  
optimal cell interactions  
(cell communication).

Rebalance of cell functions  
(metabolism).

**Point of interest:**

By delaying senescence,  
Renovage™ can extend  
cell lifespan by 1/3.

**INCI name (proposed):**

(Check CTFA on-line dictionary for latest INCI name)

Caprylic/Capric Triglyceride  
Teprenone –

**Applications:**

Anti-ageing creams, gel-creams.

**Formulation:**

Oil soluble.  
Incorporate to oil phase at 60°C  
prior to forming the emulsion.

**Recommended use level:**

3%

**Warning:**

Not to be sold or used in a  
cosmetic product in Japan.

The advertisement features a close-up of two women's faces, one on the left and one on the right, looking directly at the camera. The background is a light beige color with gold-colored gears and wavy lines, suggesting a mechanical or time-related theme. In the center, there is a large, ornate gold font that reads "Extend your skin's youthspan". Below this text, there is a "Before" and "After" comparison image showing a close-up of a woman's eye area. The "Before" image shows visible fine lines and wrinkles, while the "After" image shows a smoother appearance. To the right of the "Before" and "After" image is a large, detailed illustration of a clock mechanism, including a dial with the number "12" and several interlocking gold-colored gears. The overall aesthetic is sophisticated and suggests a connection between time, aging, and skincare.

**Protocol:** Simple blind study including 24 women, 58±6 years old, with wrinkles and not having used anti-age products for at least 1 month. No intentional UV exposure. Twice daily application of a cream formulated with 3% Renovage™, for 6 months. Evaluation of the functional and structural signs of ageing at 1 and 6 months.

### In vivo tests: Efficacy on functional signs of ageing

- **Skin moisturisation** ..... +30%\* up to +58%\*\*, improvement for 100% panellists  
Measurement by corneometry of the remnant skin moisture 24h after the last application. (\*significant/T0 p<<0.01)
- **Epidermal barrier integrity** ..... +19%\* up to +46%\*\*, improvement for 75% panellists  
Measurement by vapometer of the transepidermal water loss. (\*significant/T0 p<0.05)
- **UV Sun spots** ..... - 42%\* up to -56%\*\*, improvement for 100% panellists  
Measurement of invisible UV spots by VISIA® system under UV light. (\*significant/T0 p<<0.01)

\*\* = 1<sup>st</sup> quartile

### In vivo tests: Efficacy on structural signs of ageing

#### ● Micro depressionary network

Measurement of roughness, lines and their homogeneity of the forearm (after 1 month) and the neckline (after 6 months), by skin replicas.

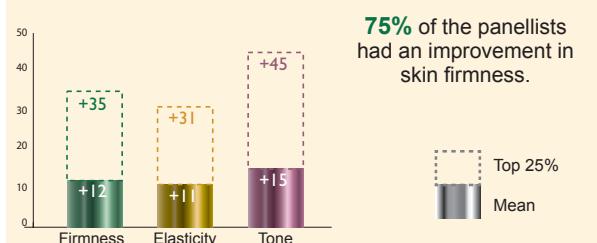

Renovage™ significantly improves the surface of the skin.  
Skin is smoother, more uniform and looks younger.

% / T0	Forearm		Neckline	
	Mean	1 <sup>st</sup> quartile	Mean	1 <sup>st</sup> quartile
Line homogeneity	+31	+103	+28	+109
Roughness	-11	-26	-14	-36
25-50µm	-4	-22	-12	-38
50-75µm	-13.5	-54	-34.5	-66.5
>75µm	-29	-64	-47	-56

#### ● Firmness / Elasticity / Tone

Measurement by cutometry after 1 month

#### ● Dilated pores

Measurement of dilated pores by Visia® system

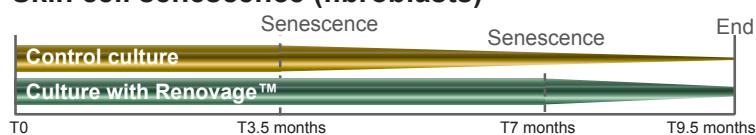

#### ● Erythrosis (redness)

Measurement of skin redness by Doppler ultrasound after 1 month on 23 panellists. (\*significant/Placebo p<0.05)

### In vitro tests: Effect of Renovage™ on the functional and structural ageing markers

- **Function loss** ..... - 60%  
Apoptotic cells after UVB irradiation, skin explants.
- **Cell resistance** ..... +75 and +100%  
HSP 27 & 70 reduction after UVB irradiation, skin explants.
- **Self-defence** ..... +100%  
Catalase activity after UVB irradiation, skin explants
- **Wound healing capacity** ..... +++  
Cell re-colonization after lesion and irradiation, keratinocytes
- **Skin cell senescence (fibroblasts)**

For a total culture duration of 9.5 months, cell life span is significantly increased by 1/3. With Renovage™, cell senescence is delayed by 3.5 months.

Renovage™ works on the origin of youth and targets the cell actors that ensure lifespan and youth. Renovage™ creates the optimal conditions in the epidermis and the dermis for visible effects on the skin surface.
